1971 ASME Boiler and Pressure Vessel Code

Section	Title
I	POWER BOILERS
II	MATERIAL SPECIFICATIONS: PART A – FERROUS PART B – NONFERROUS PART C – WELDING RODS, ELECTRODES, AND FILLER METALS
III	NUCLEAR POWER PLANT COMPONENTS
IV	HEATING BOILERS
V	NONDESTRUCTIVE EXAMINATION
VI	RECOMMENDED RULES FOR CARE AND OPERATION OF HEATING BOILERS
VII	RECOMMENDED RULES FOR CARE OF POWER BOILERS
VIII	PRESSURE VESSELS DIVISION 1 DIVISION 2 – ALTERNATIVE RULES
IX	WELDING QUALIFICATIONS
X	FIBERGLASS-REINFORCED PLASTIC PRESSURE VESSELS
XI	RULES FOR INSERVICE INSPECTION OF NUCLEAR REACTOR COOLANT SYSTEMS

Case Interpretations

The Boiler and Pressure Vessel Committee meets regularly to consider requests for interpretations of the Code and to consider rulings for conditions encountered requiring special provisions. Those which have been adopted are published in a case interpretation booklet.

Interpretation and Addenda Service

Colored Sheet Addenda, which include additions to and revisions of all existing sections of the Code, and subsequent case interpretations in white loose leaf sheets may be obtained from the ASME Order Department on a three-year subscription basis.

Addenda Color Legend

Pink	Summer 1971
Green	Winter 1971

1952, 1956, 1959, 1962, 1965, 1968, 1971.

Foreword

The American Society of Mechanical Engineers set up a committee in 1911 for the purpose of formulating standard rules for the construction of steam boilers and other pressure vessels. This committee is now called the Boiler and Pressure Vessel Committee.

The Committee's function is to establish rules of safety governing the design, the fabrication, and the inspection during construction of boilers and pressure vessels, and to interpret these rules when questions arise regarding their intent. In formulating the rules, the Committee considers the needs of users, manufacturers, and inspectors of pressure vessels.

The Boiler and Pressure Vessel Committee deals with the care and inspection of boilers and pressure vessels in service only to the extent of providing suggested rules of good practice as an aid to owners and their inspectors.

The rules established by the Committee are not to be interpreted as approving, recommending, or endorsing any proprietary or specific design or as limiting in any way the manufacturer's freedom to choose any method of design or any form of construction that conforms to the Code rules.

The Boiler and Pressure Vessel Committee meets regularly to consider requests for interpretations and revisions of the rules. Inquiries must be in writing and must give full particulars in order to receive consideration. Requests for interpretations which are of a routine nature may be executed by the Secretary of the Boiler and Pressure Vessel Committee without reference to a subcommittee. All other requests are first referred to the proper subcommittee for consideration and for recommendation of action by the Main Committee. The action of the Main Committee becomes effective only after confirmation by letter ballot of the Committee and approval by the Council of the Society.

Interpretations of general interest are published in *Mechanical Engineering* as Code Cases, and inquirers are advised of the action taken. Code revisions approved by the Committee are published

in *Mechanical Engineering* as proposed addenda to the Code to invite comments from all interested persons. After final approval by the Committee and adoption by the ASME Council, they are printed in the addenda supplements to the Code.

Code Cases (interpretations) may be used in the construction of vessels to be stamped with the ASME Code symbol beginning with the date of their approval by the ASME Council.

After Code revisions are approved by council they may be used beginning with the date of issuance shown on the addenda. Revisions become mandatory as minimum requirements six months after such date of issuance, except for boilers or pressure vessels contracted for prior to the end of the six-month period.

Manufacturers and users of pressure vessels are cautioned against making use of revisions and Cases that are less restrictive than former requirements without having assurance that they have been accepted by the proper authorities in the jurisdiction where the vessel is to be installed.

Each state and municipality in the United States and each province in the Dominion of Canada that adopts or accepts one or more Sections of the Boiler and Pressure Vessel Code is invited to appoint a representative to act on the Conference Committee to the Boiler and Pressure Vessel Committee. Since the members of the Conference Committee are in active contact with the administration and enforcement of the rules, the requirements for inspection in this Code correspond with those in effect in their respective jurisdictions. The required qualifications for an authorized inspector under these rules may be obtained from the administrative authority of any state, municipality, or province which has adopted these rules.

The Boiler and Pressure Vessel Committee in the formulation of its rules and in the establishment of maximum design and operating pressures considers materials, construction, method of fabrication, inspection, and safety devices. Permission may be granted to regulatory bodies and organizations publishing safety standards to use a complete Section

of the Code by reference. If usage of a Section, such as Section VIII, Div. 1, involves exceptions, omissions, or changes in provisions, the intent of the Code might not be attained.

Where a state or other regulatory body, in the printing of any Section of the ASME Boiler and Pressure Vessel Code, makes additions or omissions, it is recommended that such changes be clearly indicated.

The National Board of Boiler and Pressure Vessel Inspectors is composed of chief inspectors of states and municipalities in the United States and of provinces in the Dominion of Canada that have adopted the Boiler and Pressure Vessel Code. This Board, since its organization in 1919, has functioned to uniformly administer and enforce the rules of the Boiler and Pressure Vessel Code. The cooperation of that organization with the Boiler and Pressure Vessel Committee has been extremely helpful. Its function is clearly recognized and, as a result, inquiries received which bear on the administration or application of the rules are referred directly to

the National Board. Such handling of this type of inquiry not only simplifies the work of the Boiler and Pressure Vessel Committee, but action on the problem for the inquirer is thereby expedited. Where an inquiry is not clearly an interpretation of the rules, nor a problem of application or administration, it may be considered both by the Boiler and Pressure Vessel Committee and the National Board.

It should be pointed out that the state or municipality where the Boiler and Pressure Vessel Code has been made effective has definite jurisdiction over any particular installation. Inquiries dealing with problems of local character should be directed to the proper authority of such state or municipality. Such authority may, if there is any question or doubt as to the proper interpretation, refer the question to the Boiler and Pressure Vessel Committee.

The specifications for materials given in Section II of the Code are identical with or similar to those of the American Society for Testing and Materials, as indicated, except in those cases where that organization has no corresponding specification.

Statement of Policy on Use of Code

Symbols in Advertising

The American Society of Mechanical Engineers established a series of symbols for the marking of boilers, pressure vessels, and certain appurtenances which have been constructed and inspected in compliance with the ASME Boiler and Pressure Vessel Code. It is the aim of the Society to maintain the standing of the Code Symbols for the benefit of the users, the enforcement jurisdictions, and the holders of the symbols who comply with all requirements. Based on that objective the following policy has been established on the usage in advertising of facsimiles of the symbols and reference to Code construction.

The American Society of Mechanical Engineers does not "approve," "certify," "rate," or "endorse" any product or construction and there shall be no statements or inferences which might so indicate.

A manufacturer holding a Code Symbol and a Certificate of Authorization may state in advertising literature that its products "are built in accordance with the requirements of the ASME Boiler and Pressure Vessel Code," or "meet the requirements of the ASME Boiler and Pressure Vessel Code."

The ASME Symbol shall be used only for stamping and nameplates as specifically provided in the Code. However, facsimiles may be used for the purpose of fostering the use of such construction. Such usage may be by an association or a society, or by a holder of a Code Symbol who may also use the facsimile in advertising to show that clearly specified products will carry the symbol. General usage is permitted only when *all* of a manufacturer's products are constructed under the Rules.

Members of Boiler and Pressure Vessel Committees

MAIN COMMITTEE

J. M. Guy, <i>Chairman</i>	J. R. Mackay
L. P. Zick, <i>Vice Chairman</i>	R. H. Moeller

PART UB — Requirements for Pressure Vessels Fabricated by Brazing	
UB-1 General	98
UB-5 Materials	99
UB-9 Design	99
UB-30 Fabrication	101
UB-40 Inspection and Tests	104
UB-50 Stamping and Reports	104
UB-55 Pressure Relief Devices	104

SUBSECTION C REQUIREMENTS PERTAINING TO CLASSES OF MATERIALS

PART UCS — Requirements for Pressure Vessels Constructed of Carbon and Low-Alloy Steels	
UCS-1 General	105
UCS-5 Materials	105
UCS-16 Design	107
UCS-65 Low-Temperature Operation	126
UCS-75 Fabrication	127
UCS-90 Inspection and Tests	127
UCS-115 Stamping and Reports	128
UCS-125 Pressure Relief Devices	128

PART UNF — Requirements for Pressure Vessels Constructed of Nonferrous Materials	
UNF-1 General	128
UNF-5 Materials	128
UNF-16 Design	129
UNF-75 Fabrication	137
UNF-90 Inspection and Tests	137
UNF-115 Stamping and Reports	137
UNF-125 Pressure Relief Devices	151
Nonmandatory Appendix NF	151

PART UHA — Requirements for Pressure Vessels Constructed of High-Alloy Steel	
UHA-1 General	157
UHA-11 Materials	157
UHA-20 Design	174
UHA-40 Fabrication	176
UHA-50 Inspection and Tests	176
UHA-60 Stamping and Reports	177
UHA-65 Pressure Relief Devices	177
UHA-100 Nonmandatory Appendix HA	177

PART UCI — Requirements for Pressure Vessels Constructed of Cast Iron	
UCI-1 General	179
UCI-5 Materials	179
UCI-16 Design	179
UCI-75 Fabrication	181
UCI-90 Inspection and Tests	181
UCI-115 Stamping and Reports	182
UCI-125 Pressure Relief Devices	182

PART UCL – Requirements for Welded Pressure Vessels Constructed of	
	Integrally Clad Plate or With Applied Corrosion Resistant Linings
UCL-1	General 182
UCL-10	Materials 182
UCL-20	Design 183
UCL-30	Fabrication 184
UCL-50	Inspection and Tests 187
UCL-55	Stamping and Reports 187
UCL-60	Pressure Relief Devices 187
PART UCD – Requirements for Pressure Vessels Constructed of Cast Ductile Iron	
UCD-1	General 188
UCD-5	Materials 188
UCD-16	Design 188
UCD-75	Fabrication 190
UCD-90	Inspection and Tests 190
UCD-115	Stamping and Reports 191
UCD-125	Pressure Relief Devices 191
PART UHT – Requirements for Pressure Vessels Constructed of Ferritic Steels	
	With Tensile Properties Enhanced by Heat Treatment
UHT-1	General 192
UHT-5	Materials 192
UHT-16	Design 193
UHT-75	Fabrication 198
UHT-90	Inspection and Tests 200
UHT-115	Stamping and Reports 200
UHT-125	Pressure Relief Devices 201

MANDATORY APPENDICES

UA-1	APPENDIX I – Supplementary Design Formulas	202
UA-45	APPENDIX II – Rules for Bolted Flanged Connections	210
UA-60	APPENDIX III – Definitions	238
	APPENDIX IV – Porosity Charts	242
	APPENDIX V – Charts for Determining Shell Thickness of Cylindrical and Spherical Vessels Under External Pressure	248
UA-70	APPENDIX VI – Methods for Magnetic Particle Inspection – MT	284
UA-80	APPENDIX VII – Inspection and Testing of Steel Castings	287
UA-91	APPENDIX VIII – Methods for Liquid Penetrant Examination – PT	290
UA-100	APPENDIX IX – Jacketed Vessels	293

NONMANDATORY APPENDICES

	APPENDIX A – <i>See Mandatory Appendix IV</i>	
UA-110	APPENDIX B – Approval of New Materials	301
UA-130	APPENDIX C – Method for Obtaining Operating Temperature of Vessel Walls in Service	302
UA-140	APPENDIX D – Suggested Good Practice Regarding Internal Structures	303
UA-155	APPENDIX E – Suggested Good Practice Regarding Corrosion Allowance	303
UA-170	APPENDIX F – Suggested Good Practice Regarding Linings	304
UA-185	APPENDIX G – Suggested Good Practice Regarding Design of Supports	305

ASME BOILER and PRESSURE VESSEL CODE

SECTION VIII PRESSURE VESSELS DIVISION 1

*The 1971 Edition of Section VIII, Pressure Vessels, Division 1, was approved by the
Council of The American Society of Mechanical Engineers on August 10, 1970.*

SCOPE

U-1 Scope

(a) The rules in this Division of Section VIII of the Code cover minimum construction requirements for the design, fabrication, inspection, and certification of pressure vessels other than those covered by Section I, Section III, and Section IV. This section of the Code does not cover Fired Process Tubular Heaters.

Division 1 of Section VIII is divided into three Subsections. Subsection A consists of Part UG covering the general requirements applicable to all pressure vessels. Subsection B covers the specific requirements that are applicable to the various methods used in the fabrication of pressure vessels. It consists of Parts UW, UR, UF, and UB, dealing with welded, riveted, forged, and brazed methods, respectively. Subsection C covers specific requirements applicable to the several classes of materials used in pressure vessel construction. It consists of Parts UCS, UNF, UHA, UCL, UCL, UCD, and UHT dealing with carbon and low-alloy steels, nonferrous metals, high-alloy steels, cast iron, clad and lined material, cast ductile iron, and ferritic steels with properties enhanced by heat treatment, respectively.

(b) The rules of this Division of Section VIII of the Code have been formulated on the basis of design principles and construction practices applicable to vessels designed for pressures not exceeding 3000 psi. For pressures above 3000 psi, deviations from and additions to these rules usually are necessary to meet the requirements of design principles and construction practices for these higher pressures. Only in the event that after having applied these additional design principles and construction practices the vessel still complies with all of the requirements of the Code may it be stamped with the Code symbol.

(c) It is intended that Code jurisdiction over piping external to a pressure vessel shall terminate at:

(1) The first circumferential joint for welding end connections;

(2) The face of the first flange in bolted flanged connections;

(3) The first threaded joint in that type of connection.

(d) The following classifications are not considered to be within the jurisdiction of this Division of Section VIII.

(1) Pressure vessels subject to Federal control;

(2) Vessels with a nominal water containing capacity of 120 gallons or less for containing water
