Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 244, *Industrial furnaces and associated processing equipment*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 186, *Industrial thermoprocessing - Safety*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This second edition cancels and replaces the first edition (ISO 13577-4:2014), which has been technically revised.

The main changes are as follows:

- to provided better clarity methods B and C were combined to create a new method BC,
- [Annex E](#) was rewritten to provide several new examples to better reflect the intent for previously misunderstood elements,
- [Annex B](#) was modified to include clearer language and examples of normative wiring. The original [Annex F](#) was merged,
- created wording to provide a better alignment with IEC 62061, IEC 61511, and ISO 13849-1.

A list of all parts in the ISO 13577 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

This document was developed to specify the requirements of a protective system, which is a safety-related control system (SCS) of industrial furnaces and associated processing equipment (TPE). It is intended that in designing the protective system of TPE, manufacturers of TPE choose from the three methods provided in this document. Requirements for safety-related control functions of TPE are specified in ISO 13577-1, ISO 13577-2, and ISO 13577-3.

This document is intended to be used jointly with ISO 13577-1, ISO 13577-2 and ISO 13577-3. Since the other parts of the ISO 13577 series are type-C standards of ISO 12100, TPE are required to be designed in accordance with the principles of ISO 12100. The type-B standards of ISO 12100 for SCS are IEC 62061 or ISO 13849-1, which always assume high-demand applications. However, there are cases in which a risk assessment according to the IEC 61511 series, which provides the option of a low-demand rate on the protective system, is more suitable for the design of a TPE protective system.

In principle, when requirements of ISO 13577-1, ISO 13577-2 and ISO 13577-3 (type-C standards) are different from those which are stated in type-A or -B standards, the requirements of the type-C standards take precedence over the requirements of the other standards for machines, which have been designed and built according to the requirements of the type-C standards. Therefore, this document permits risk assessment for safety-related electrical control systems (SRECS) in which risk assessment based on the IEC 61511 series can be chosen as an alternative.

Industrial furnaces and associated processing equipment — Safety —

Part 4: Protective systems

1 Scope

This document specifies the requirements for protective systems used in industrial furnaces and associated processing equipment (TPE).

The functional requirements to which the protective systems apply are specified in ISO 13577-1, ISO 13577-2 and ISO 13577-3.

This document is not applicable to blast furnaces, converters (in steel plants), boilers, fired heaters (including reformer furnaces) in the petrochemical and chemical industries.

This document is not applicable to electrical cabling and power cabling upstream of the TPE control panel/protective system.

This document is not applicable to the protective systems manufactured before the date of its publication.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
